

St Johns College, Bundaberg

Project

New school buildings

Client

Anglican Diocese

Completion Date

May 2010

Project Details

This project, like other education projects involved numerous stages: the demolition of an existing block; construction of a multi-purpose hall including an accessible platform lift to the performance stage with a new classroom extension to one end; and the extension to an existing library.

These facilities are quite central to the full functioning of a school and enhance the educational environment.

Our practice is that each is completed and handed over to allow the school to function around the progressive construction phases.

WCQ were mindful of safety concerns and worked around a strict set of procedures agreed to with the school to allow the controlled flow of students between buildings and school playground areas. This included a two way gate which was operated under agreed protocols to allow access and flow of students without compromising safety. The project is another testimony to WCQ's understanding of working within an educational environments.
